TITLE : PHOTOCATALYTICALLY FUNCTIONAL
MATERIAL FOR STICKING

ABSTRACT : PROBLEM TO BE SOLVED: To provide a photocatalytically functional material for sticking for providing easily the photocatalytic effect for existing tiles or the like.

SOLUTION: A base 2 is provided on the surface of a release sheet 5 through a water-soluble binder 6, and a binder layer 7 is formed on the surface of the base 2, and TiO₂ particles 3 are sprayed on the surface of the binder layer 7 so as to expose a part of particles thereon to compose of sheet S. Then the release sheet 5 is released and the sheet S is stuck on the surface of a stile base 1 and then heated and cooled. As the sheet S with the photocatalytic function is provided separately, the photocatalytic function such as deodorizing can be provided simply for existing tiles or the like.
